EXPERIENCE

Best Egg

New York, NY / Remote (04.2021 – Present)

Software Engineer II

Architected two Vue 3 front-ends during a major product rebuild and migration from React, ensuring scalability and a seamless dev experience.

Took ownership of testing, custom logging, and monitoring user behavior, which resulted in more proactive bug reporting and faster resolution times.

Beyond coding, I actively mentored junior engineers through pair programming sessions.

I was promoted to a lead role when our team was acquired in 2022.

Freelance Engineer

Washington, D.C. (04.2020 – 04.2021)

During COVID, I built out my own projects and freelanced for early stage businesses.

[squad](#) – A full-featured SaaS task management app that makes it easier for small teams to stay on the same page, week-to-week.

[greywing](#) – Early stage YC company. I worked with the founders to build the frontend of their cargo ship fleet management platform, and their marketing site.

[vodium](#) – An Electron app for macOS and Windows. I built this turnkey SaaS business for a client, which included a marketing site and payment implementation via Stripe.

[queen ballers](#) – A headless Wordpress site built from scratch using Next.js (app router). Queen Ballers provides in depth women's basketball coverage, and is optimized for load time and SEO performance.

EVERFI

Washington, D.C. (08.2019 – 03.2020)

Director of Web Operations

Managed a team of internal Wordpress developers and an external web dev agency.

In just a few months we rebuilt Everfi's marketing website to align with the company's new product direction.

Improved blog performance, achieving 50% decrease in page load time and an improved user experience.

CVENT (Social Tables)

Washington, D.C. (01.2016 – 03.2019)

Web Developer, Marketing Creative

Spearheaded a massive website migration project. Transitioned from a rigid WordPress implementation to a flexible framework, enabling faster iteration.

Improved website performance and search ranking by reducing page load time by 25%. Achieved a 50% YoY increase in overall website traffic and a phenomenal 120% YoY growth in organic search traffic.

Contributed to the entire marketing stack, including content marketing, graphic design, automation, technical SEO, and primarily owned marketing website operations.

SKILLS

HTML CSS SCSS

Node.js Javascript

Typescript React
